

## 200M Series Mixer Body Change

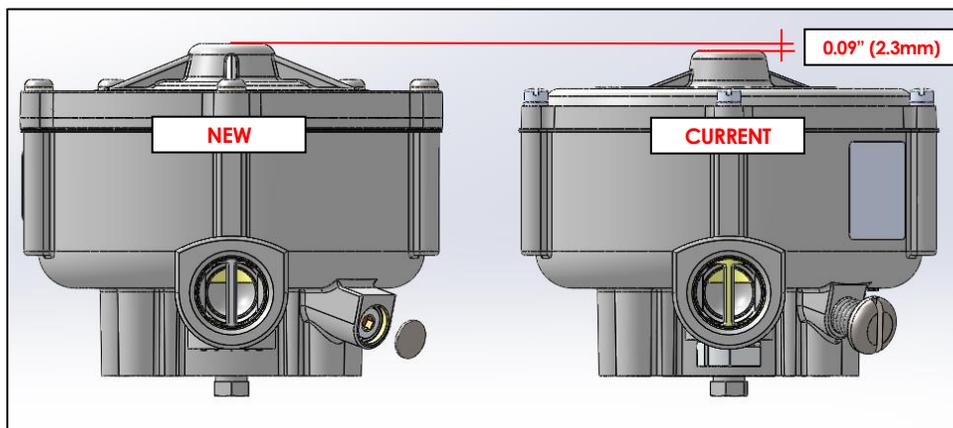

In line with changes already made to other model IMPCO mixers, beginning in Q1 2021 all products in the 200M mixer line will be upgraded to include tamper-capable fuel adjustments as well as an improved diaphragm cover.

### Adjustments (Power and Idle) Change

The main change is the replacement of the existing wrench adjusted power valve and slot screw adjusted idle with emissions 'tamper capable' hex drive adjustments [3/16" (5mm) idle and 1/4" (6mm) power valve] as shown;

The new diaphragm cover will increase the overall height of the part by approximately 0.090" (2.3mm).

There will be no changes to product performance / flow, and all currently available part numbers will remain available with no change in part number. Existing parts that do not already have a tamper-proof requirement will ship without caps, caps can be ordered separately if required PN: P3-17956-22 (idle) / P3-17956-20 (power valve)
